Cartographic production during the past three years for which no additional personnel was provided

Since October 1958 the Cartography Division was requested to participate in a number of major projects requiring a large number of major projects requiring a large number of man-hours for which no personnel increases were allotted. Satisfactory completion of this work during this period was accomplished by greater efficiency in operation and extensive use of overtime. During these years approximately 6,000 man-hours of overtime were necessary. The following programs either came into being or were greatly expanded in this period:

1. DD/P - Cartographic assistance to clandestine operations increased greatly. Two hundred and sixty three (263) projects of varying degrees of complexity were accepted and completed, with about even distribution of the work among SR 6, FE, and WH components. Activities in the China-Tibet Area, the Cuba Invasion planning, the Dominican Republic project, and the Russian City plans production accounted for the bulk of this work. The city plan work in particular required assignment of one and at times two people full time at PIC where special materials were available.

2. Department of State - During the three year period the activities of the Geography Division of the Department of State received increased impetus when Dr. Percy became Chief of the Division. The completion of 186 projects by D/GC for State reflected this increased activity. These projects included many new activities initiated by Percy; maps on the Consular Districts of the Department, Areas closed to foreigners in the U. S. and the USSR, boundary study maps, various contributions to Department publications and reports, and many others.

4. PIC - Requests from the Photographic Intelligence Center both for base maps for use in their reports and for cartographic assistance in the form of special symbols and other aids required an appreciable number of man-hours. Special materials available at PIC were utilized by the Division to support DD/P activities. 25X1A

5. [REDACTED] Although production of [REDACTED] occurred prior to 1958, since that date an appreciable increase in their activities has resulted in greater demands for cartographic support. Sixty-one projects, many requiring a large number of man-hours, were completed in this period.

6. Atomic Energy and Guided Missiles - Cartographic requirements in these fields have been relatively small until recently when the Guided Missile Staff was activated. Prior to that time most requests were in support of D/GG and other spot requirements. Approximately 80 man-hours have been expended during the three year period in support of known atomic energy and guided missile projects.
